

The National Complete Streets Coalition, a program of Smart Growth America, is a non-profit, non-partisan alliance of public interest organizations and transportation professionals committed to the development and implementation of Complete Streets policies and practices. A nationwide movement launched by the Coalition in 2004, Complete Streets is the integration of people and place in the planning, design, construction, operation, and maintenance of transportation networks.

Smart Growth America is the only national organization dedicated to researching, advocating for, and leading coalitions to bring better development to more communities nationwide. From providing more sidewalks to ensuring more homes are built near public transportation or that productive farms remain a part of our communities, smart growth helps make sure people across the nation can live in great neighborhoods.

Executive Summary

The U.S. Surgeon General and Secretary of Transportation both spoke out for more Complete Streets last year. Congress passed a transportation bill that included Complete Streets language for the first time ever. And the City of Reading, PA adopted the first policy to ever score a perfect 100 in our analysis. Together, these all helped set a new high water mark for the national movement for safer streets across the country.

A Complete Streets approach creates an integrated transportation system that supports safe travel for people of all ages and abilities. This approach redefines what a transportation network looks like, which goals a public agency sets out to meet, and how communities prioritize their transportation spending. A Complete Streets policy is one of the best ways to set this approach into motion.

In 2015, communities passed a total of 82 Complete Streets policies. These laws, resolutions, agency policies, and planning and design documents establish a process for selecting, funding, planning, designing, and building transportation projects that allow safe access for everyone, regardless of age, ability, income or ethnicity, and no matter how they travel.

Nationwide, a total of 899 Complete Streets policies are now in place, in all 50 states, the Commonwealth of Puerto Rico, and the District of Columbia. Thirty-two state governments or agencies, 76 regional organizations, and 663 individual municipalities have all adopted such policies to create safer, multimodal transportation networks.

Each year, the National Complete Streets Coalition analyzes newly passed Complete Streets policies. The Coalition examines and scores policy language using the guidelines laid out in our ideal policy elements. Ideal policies state a community's vision for transportation, provide for many types of users, complement community needs, and establish a flexible project delivery approach. Different types of policy statements are included in the Coalition's review, including legislation, resolutions, executive orders, internal policies, and policies adopted by an elected board.

The Coalition ranks new Complete Streets policies to celebrate the people who developed exceptional policy language and to provide leaders at all levels of government with examples of strong Complete Streets policies.

Sixteen agencies led the nation in creating and adopting comprehensive Complete Streets policies in 2015:

- 1. Reading, PA
- 2. West Hartford, CT
- 3. Park Forest, IL South Bend, IN Longmeadow, MA
- 4. Weymouth, MA
- 5. Omaha, NE
- 6. Vincennes, IN

- 7. Ashland, MA Natick, MA Norwell, MA
- 8. Little Rock, AR
- 9. Framingham, MA Lynn, MA Portage, MI
- 10. Battle Ground, WA

We congratulate these communities for their work making streets safer, healthier, and more economically vibrant, and for showing other communities across the country just how strong and effective Complete Streets policies can be.

Introduction

A call to action on the United States' obesity epidemic, a challenge on safety from a federal cabinet secretary, new standards for transportation in Congress, and the first-ever perfect-scoring policy all made 2015 a banner year for the national movement for Complete Streets.

A Complete Streets approach integrates the needs of people and place in the planning, design, construction, operation, and maintenance of transportation networks. In doing so, streets become safer for people of all ages and abilities and better support overall public and economic health. Complete Streets redefines what a transportation network looks like, which goals a transportation agency is going to meet, and how a community prioritizes its transportation spending. The Complete Streets approach breaks down the traditional separation between planning and designing for driving, transit, walking, and bicycling.

The movement gained new momentum in 2015. In January, the U.S. Secretary of Transportation challenged the nation's mayors to advance safety and accessibility goals in part by using a Complete Streets approach. In September, the U.S. Surgeon General called on communities to help Americans make physical activity a bigger part of their daily routines, in part by using a Complete Streets approach. And for the first time ever, in December, Congress passed a federal transportation bill (the FAST Act) that included Complete Streets language, making this approach to the planning, design, construction, operation, and maintenance of transportation networks a formal part of federal policy.¹

It wasn't just federal agencies taking action. More local communities took action for Complete Streets in 2015, as well. In 2015, 77 jurisdictions adopted a total of 82 Complete Streets policies.² Of those, 73 are eligible for this year's rankings.³ Nationwide, a total of 899 Complete Streets policies are now in place, in all 50 states, the Commonwealth of Puerto Rico, and the District of Columbia (see Appendix B starting on page 23 for the full list). Thirty-two state governments or agencies, 76 regional organizations, and 663 individual municipalities have all adopted such policies to create safer, multimodal transportation networks.⁴

Each year the National Complete Streets Coalition ranks new Complete Streets policies to celebrate the people who developed exceptional policy language and to provide leaders at all levels of government with examples of strong Complete Streets policies. This year the Coalition is proud to award the City of Reading, PA's 2015 policy the first-ever score of 100 points. We want to congratulate Reading in particular for their outstanding work. Notably, and key for a perfect score like this, the policy goes beyond a vision for Complete Streets to clearly commit to building an integrated, context-sensitive transportation network.

Complete Streets efforts are almost always are the fruit of diverse alliances among advocates for older adults and public health, transportation practitioners, bicycling and walking proponents, and many others. The policies passed this year and the momentum at the national level reflects this diversity.

1

¹ Learn more about Complete Streets in the FAST Act in our one-pager on the bill: http://www.smartgrowthamerica.org/documents/Complete-Streets-FAST-Act-One-Pager.pdf

⁸⁴³ jurisdictions have passed a total of 899 policies. Several jurisdictions have passed more than one qualifying policy.

³ Plans and design guidelines are not scored. Read why on page 22.

⁴ Some municipalities have passed multiple policies.

Passing a policy: the first step to Complete Streets

Complete Streets policies represent a community's intent to select, design, and build transportation projects that provide safe, attractive transportation options to homes, workplaces, schools, healthcare facilities, civic and cultural centers, and other important destinations. They direct decision-makers to consistently fund, plan for, construct, operate, and maintain community streets to accommodate all anticipated users, including people walking, bicycling, taking public transportation and driving cars and commercial vehicles.

The National Complete Streets Coalition recognizes many types of statements as official commitments to a Complete Streets approach, including legislation, resolutions, executive orders, internal policies, policies adopted by an elected board, tax ordinances, comprehensive or master plans, and design guidance. Complete Streets legislation includes bills that require the needs of all users to be addressed in transportation projects by changing city, county, or state codes or statutes. Resolutions are non-binding official statements from a jurisdiction's legislative branch and executive orders are high-level directives issued by a mayor or governor. Internal policies are adopted by the leadership of a jurisdiction's transportation agency, office, or department without action from an elected body. Policies adopted by an elected board are statements, usually developed by a group of stakeholders, and are approved by an elected governing body via an adopting resolution or ordinance. Tax ordinances are a legislative or voter-approved ordinance to fund Complete Streets projects. Some communities also incorporate Complete Streets into comprehensive or transportation master plans or through updates to street design guidance and standards. This report analyses all types of policy documents except plans and design guidance.

This report evaluates the language of Complete Streets policies adopted in 2015, based on a comprehensive policy model that includes ten ideal elements:

- 1. **Vision:** The policy establishes a motivating vision for why the community wants Complete Streets: to improve safety, promote better health, make overall travel more efficient, improve the convenience of choices, or for other reasons.
- 2. **All users and modes:** The policy specifies that "all modes" includes walking, bicycling, riding public transportation, driving trucks, buses and automobiles and "all users" includes people of all ages and abilities.
- 3. **All projects and phases:** All types of transportation projects are subject to the policy, including design, planning, construction, maintenance, and operations of new and existing streets and facilities.
- 4. **Clear, accountable exceptions:** Any exceptions to the policy are specified and approved by a high-level official.
- 5. **Network:** The policy recognizes the need to create a comprehensive, integrated and connected network for all modes and encourages street connectivity.
- 6. **Jurisdiction:** All other agencies that govern transportation activities can clearly understand the policy's application and may be involved in the process as appropriate.
- 7. **Design:** The policy recommends use of the latest and best design criteria and guidelines, while recognizing the need for design flexibility to balance user needs in context.
- 8. **Context sensitivity:** The current and planned context—buildings, land use, transportation, and community needs—is considered in when planning and designing transportation solutions.
- 9. **Performance measures:** The policy includes performance standards with measurable outcomes
- 10. **Implementation steps:** Specific next steps for implementing the policy are described.

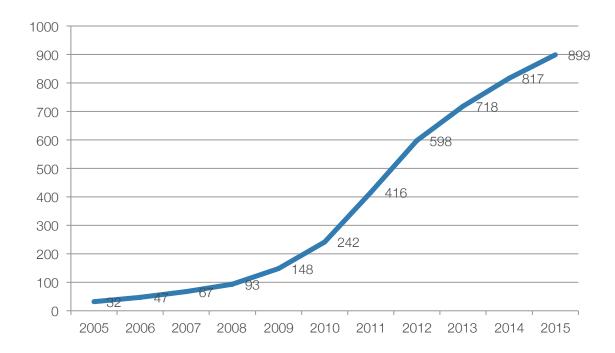

These elements were developed in consultation with members of the Coalition's Steering Committee and its corps of workshop instructors, and through its ongoing research efforts. Based on decades of collective experience in transportation planning and design, the ten elements are a national model of best practice that can be employed in nearly all types of Complete Streets policies at all levels of governance.

Our analysis is designed to recognize communities that have integrated best practices into their policy documents. More information about our ideal elements, and ideas for how your community can pass an outstanding policy of its own, is included in Appendix A of this report, starting on page 10.

National trends in Complete Streets policies

This year continued an upward national trend of Complete Streets policy adoption since 2005 (see Figure 1 below).

FIGURE 1
Number of Complete Streets policies nationwide, 2005–2015

Today, 899 Complete Streets policies are in place nationwide, including 32 state agencies, the Commonwealth of Puerto Rico and the District of Columbia; 76 regional planning organizations; and 663 municipalities. Eighty-two of those policies were adopted in 2015 alone.

Small towns and big cities alike see Complete Streets as integral to their transportation goals (see Figure 2 on page 5). Of the 663 municipalities with Complete Streets policies, 239 (or 36 percent) are suburban communities. Small towns, often in rural areas, have passed 111 policies, or 17 percent of all municipal policies. On the other end of the spectrum, 12 of the 15 most populous cities in the country have committed to Complete Streets with a policy.⁵

The types of policies in place are similarly diverse (see Figure 3 on page 5). While most take the form of a resolution adopted by a city or county council, jurisdictions are also commonly using policies adopted by an elected board and city-level legislation to direct the use of a Complete Streets approach. Of the 73 Complete Streets policies scored as part of our 2015 analysis, 33 were city or metropolitan planning organization (MPO) resolutions; 21 were policies adopted by an elected board; 16 were city legislation; 3 were city executive orders; and 1 was an internal state policy.

Including the cities of Austin, TX; Chicago, IL; Columbus, OH; Houston, TX; Indianapolis, IN; Jacksonville, FL; New York, NY; Philadelphia, PA; Phoenix, AZ; San Antonio, TX; San Diego, CA; San Francisco, CA, which all have Complete Streets policies in place.

Policy adoption was most evident in Massachusetts this year, where ten jurisdictions adopted policies, and in New Jersey, where eight jurisdictions adopted policies. Overall, the states with the most policies now in place are New Jersey with 126 and Michigan with 85. Meanwhile, California (69), Florida (61), and New York (60) added to their impressive totals this year. Nationally, there are now 25 states with 10 or more Complete Streets policies at the local, regional, or state level.

FIGURE 2
Municipalities with Complete Streets policies by size, 1971-2015

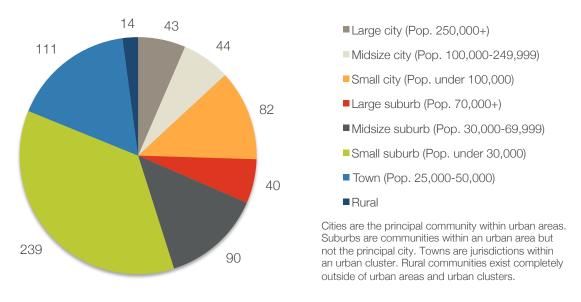

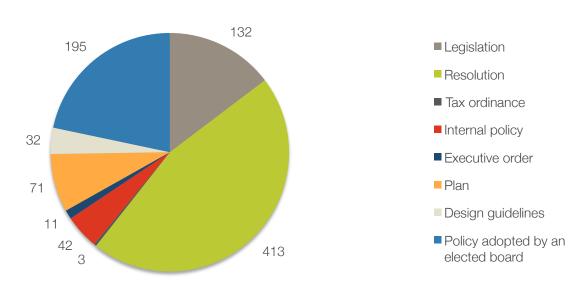

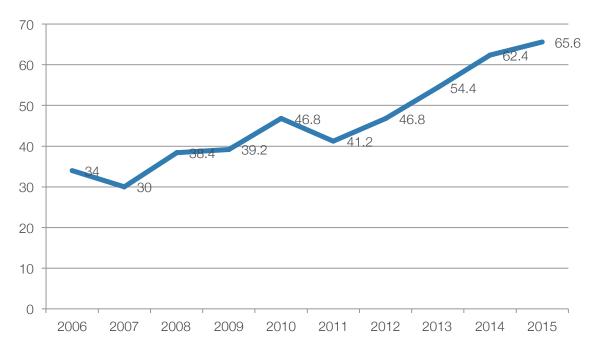

FIGURE 3
Complete Streets policies by type, 1971-2015

Policies overall continued to improve this year, with the annual median policy score rising from 62 out of 100 in 2014 to 66 in 2015. This year's strong policies helped raise the overall median score of all policies ever passed to 48 (see Figure 4 on page 6).

FIGURE 4
Median score of Complete Streets policies by year, 2006-2015

When analyzing Complete Streets policies, we look for language that will help the largest number of people, including all ages and abilities, traveling by all modes. Eighty-one percent of policies analyzed from 2015 covered all abilities, 80 percent mentioned all ages, and 84 percent mentioned more modes of transportation than bicyclists, pedestrians, and transit. Among all policies ever analyzed, 86 percent mentioned all abilities, 74 percent covered all ages, and 82 percent mentioned more modes than bicyclists, pedestrians, and transit.

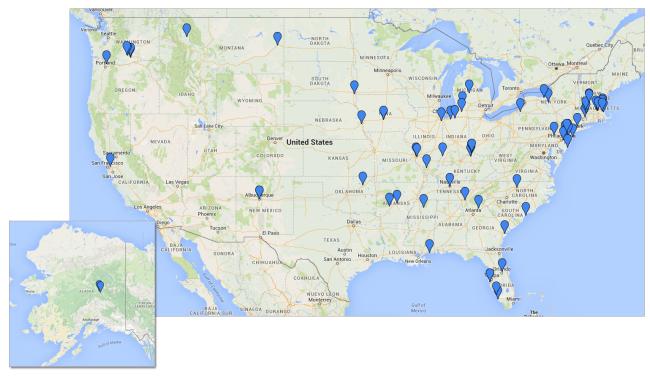

Complete Streets policies also have the capacity to impact broader community design decisions. Some policy elements—such as context sensitivity, using the best or latest design guidelines, and prioritizing network connectivity—influence how future projects will be integrated into a jurisdiction's streetscape, architecture, and planning. Of policies analyzed from 2015, 73 percent mentioned the importance of using a network approach (in contrast to 50 percent of all policies analyzed), 69 percent covered the need for context sensitivity (in contrast to 52 percent of all policies analyzed), and 63 percent required use of the best or latest design guidelines for Complete Streets projects (in contrast to 45 percent of all policies analyzed).

Adopting a Complete Streets policy is the first step in creating streets that are safe and comfortable for all types of people. The Coalition recommends that specific next steps be included in policy language to ensure integration of Complete Streets into the transportation process. Our analysis shows that the number of newly adopted policies with specific implementation steps continues to grow over time. Of the policies analyzed from 2015, 86 percent named at least 1 implementation activity (in contrast to 58 percent of all policies analyzed), and 63 percent included at least two of the next steps recommended by the Coalition (in contrast to 27 percent of all policies analyzed). Building on those steps, 45 percent of policies analyzed from 2015 (in contrast to 22 percent of all policies analyzed) identified a specific person or committee to oversee implementation or required regular public reporting on progress. The following section looks at which policies from 2015 are designed to best meet these goals.

The best Complete Streets policies of 2015

In 2015, communities across the United States demonstrated their commitment to providing for safe access to destinations for everyone, regardless of age, ability, income, or how they travel by passing a total of 82 new Complete Streets policies. Figure 5, below, details the geographic distribution of last year's policies.

FIGURE 5
Complete Streets policies passed in 2015

Note: This map is diagrammatic, and actual policy locations may be slightly different than are represented here.

Of the 82 policies passed, 73 are eligible for this year's rankings. The Coalition evaluated each of these based on our established elements of an ideal Complete Streets policy (outlined on page 2 and discussed in more detail in Appendix A, starting on page 10). Policies were awarded up to five points for how well they fulfilled each of the ten elements, and scores were weighted to emphasize the more important elements of a written policy.

The policies in Table 1 on page 8 garnered the top scores across all ten elements.

⁶ Plans and design guidelines are not scored. Read why on page 22.

TABLE 1
The best Complete Streets policies of 2015

Rank	Jurisdiction	State	Score	Policy

Turning policy into practice

After more than a decade of work, the Coalition is encouraged that so many communities have passed Complete Streets policies. The analysis provided is intended to celebrate great work, as well as to give communities interested in creating their own policies the best possible model to follow.

The concept of "Complete Streets" is itself simple and inspiring, but to be truly effective a community's work doesn't stop there. Implementing these policies—turning policy into practice—is a crucial continuation of this work. And as much as we value strongly written policy language, these policies are of little value if communities do not use them to change practices and put projects on the ground.

The National Complete Streets Coalition offers a range of materials and courses to help communities implement their policies. Full implementation requires agencies to make changes like including new project development processes, design standards, educational and outreach efforts, and performance measures. We are excited to continue to support the 899 jurisdictions with Complete Streets policies in place as they move on to the implementation phases of their work. Find out more about our implementation services at www.smartgrowthamerica.org/complete-streets/implementation.

Appendix A: Scoring methodology

To help communities understand what makes strong, effective Complete Streets policies, the Coalition established an objective set of ten ideal policy elements. These elements were developed in consultation with members of the National Complete Streets Coalition's Steering Committee and its corps of workshop instructors, and through its ongoing research efforts. Based on decades of collective experience in transportation planning and design, the ten elements are a national model of best practice that can be employed in nearly all types of Complete Streets policies at all levels of governance.

The following section provides more information about these ideals, and highlights of these ideals in this year's policies. For communities considering a Complete Streets policy, this section can provide models to follow. For communities with an existing Complete Streets policy, this section may provide ideas for improvements or, perhaps, reasons to boast.

More information about writing Complete Streets policies is available in our *Complete Streets Local Policy Workbook*. Download your copy at http://www.smartgrowthamerica.org/guides/complete-streets-local-policy-workbook/.

Elements of a Complete Streets policy

1. Vision and intent

A strong vision inspires a community to follow through on its Complete Streets policy. Just as no two policies are alike, visions are not one-size-fits-all either. Visions cannot be empirically compared across policies, so this element compares the strength and clarity of each policy's commitment to Complete Streets. Clarity of intent and writing makes it easy for those tasked with implementation to understand the new goals and determine what changes need to be made to fulfill the policy's intent.

- <u>5 points:</u> The strongest policies are those that are clear in intent, stating unequivocally facilities that meet the needs of people traveling on foot or bicycle "shall" or "must" be included in transportation projects. Full points also are awarded to policies in which the absolute intent of the policy is obvious and direct, even if they do not use the words "shall" or "must," because there is a complete lack of other equivocating language.
- <u>3 points:</u> Many policies are clear in their intent—defining what a community expects from the policy—but use equivocating language that waters down the directive. For example, an average policy says that the needs of pedestrians and bicyclists "will be considered" or "may be included" as part of the process.
- 1 point: Some policies are indirect: they refer to implementation of certain principles, features, or elements defined elsewhere; refer to general "Complete Streets" application with no clear directive; or instruct the development of a more thorough policy document. Examples of indirect language include phrases such as "consider the installation of 'Complete Streets' transportation elements," "Complete Streets principles," or "supports the adoption and implementation of 'Complete Streets' policies and practices to create a transportation network that accommodates all users." Using this language perpetuates the separation of modes and the perception that a road for cars is fundamentally different from the road for other users, that

only some roads should be "complete streets," and even that these roads require special, separately funded "amenities."

VISION AND INTENT

From Park Forest, IL's policy:

"Vision: This Complete Streets Policy shall direct the Village of Park Forest to develop and provide a safe and accessible, well-connected and visually attractive surface transportation network, that balances the needs of all users, including: motorists, pedestrians, bicyclists, public transportation riders and driver, emergency vehicles, freight carriers, agricultural vehicles and land uses and promote a more livable community for people of all ages and abilities, including children, youth, families, older adults and individuals with disabilities."

http://www.smartgrowthamerica.org/documents/cs/policy/cs-il-parkforest-resolution.pdf

2. All users and modes

No policy is a Complete Streets policy without a clear statement affirming that people who travel by foot or on bicycle are legitimate users of the transportation system and equally deserving of safe facilities to accommodate their travel. It is therefore a requirement to include both modes—walking and bicycling—in the policy before it can be further analyzed. Beyond the type of user is a more nuanced understanding that not all people who move by a certain mode are the same.

- <u>3 points:</u> Policy includes two more modes, in addition to walking, bicycling, and public transportation. Such modes include cars, freight traffic, emergency response vehicles, or equestrians.
- <u>2 points:</u> Policy includes one more mode, in addition to walking, bicycling, and public transportation.
- 1 point: Policy includes public transportation, in addition to walking and bicycling.
- Required/0 points: Policy includes walking and bicycling.

The needs of people—young, old, with disabilities, without disabilities—are integral to great Complete Streets policies. Two additional points are available, awarded independently of each other and above points for modes.

- 1 point: A policy references the needs of people young and old.
- <u>1 point:</u> A policy includes the needs of people of all abilities.

ALL USERS AND MODES

From Norwell, MA's policy:

"It is the intent of the Town of Norwell to formalize the plan, design, operation, and maintenance of streets so that they are safe for users of all ages, all abilities and all income levels as a matter of routine. This Policy directs decision-makers to consistently plan, design, construct, and maintain streets to accommodate all anticipated users including but not limited to pedestrians, bicyclists, motorists, emergency vehicles, and freight and commercial vehicles."

http://www.smartgrowthamerica.org/documents/cs/policy/cs-ma-norwell-policy.pdf

3. All projects and phases

The ideal result of a Complete Streets policy is that *all* transportation improvements are viewed as opportunities to create safer, more accessible streets for all users.

- 3 points: Policy applies to reconstruction and new construction projects.
- <u>O points:</u> Policy does not apply to projects beyond newly constructed roads, or is not clear regarding its application.
- <u>2 additional points available:</u> Policy clearly includes maintenance, operations, resurfacing, repaving, or other types of changes to the transportation system.

ALL PROJECTS AND PHASES

From Little Rock, AR's policy:

"...the City will apply this complete streets policy to all street projects for public streets, regardless of funding source, including those involve new construction, reconstruction, retrofit, repaving, rehabilitation, and change in the allocation of pavement space on an existing street."

 $\underline{\text{http://www.smartgrowthamerica.org/documents/cs/policy/cs-ar-littlerock-ordinance.pdf}}$

4. Clear, accountable exceptions

Making a policy work in the real world requires a process for exceptions to providing for all modes in each project. The Coalition believes the following exceptions are appropriate with limited potential to weaken the policy. They follow the Federal Highway Administration's guidance on accommodating bicycle and pedestrian travel and identified best practices frequently used in existing Complete Streets policies.

- 1. Accommodation is not necessary on corridors where specific users are prohibited, such as interstate freeways or pedestrian malls.
- 2. Cost of accommodation is excessively disproportionate to the need or probable use. The Coalition does not recommend attaching a percentage to define "excessive," as the context

for many projects will require different portions of the overall project budget to be spent on the modes and users expected. Additionally, in many instances the costs may be difficult to quantify. A percentage cap may be appropriate in unusual circumstances, such as where natural features (e.g. steep hillsides, shorelines) make it very costly or impossible to accommodate all modes. The Coalition does not believe a cap lower than 20 percent is appropriate, and any cap should always be used in an advisory rather than absolute sense.

3. A documented absence of current and future need.

Many communities have included other exceptions that the Coalition, in consultation with transportation planning and engineering experts, also feels are unlikely to create loopholes:

- 1. Transit accommodations are not required where there is no existing or planned transit service.
- 2. Routine maintenance of the transportation network that does not change the roadway geometry or operations, such as mowing, sweeping, and spot repair.
- 3. Where a reasonable and equivalent project along the same corridor is already programmed to provide facilities exempted from the project at hand.

In addition to defining exceptions through good policy language, there must be a clear process for granting them, preferably with approval from senior management. Establishing this within a policy provides clarity to staff charged with implementing the policy and improves transparency and accountability to other agencies and residents.

- <u>5 points:</u> Policy includes one or more of the above exceptions—and no others—and stating who is responsible for approving exceptions.
- <u>4 points:</u> Policy includes any other exceptions, including those that weaken the intent of the Complete Streets policy, and stating who is responsible for approval.
- <u>3 points:</u> Policy includes one or more of the above exceptions—and no others—but does not assign responsibility for approval.
- <u>1 point:</u> Policy includes any other exceptions, including those that weaken the intent of the policy, but does not assign responsibility for approval.
- 0 points: Policy lists no exceptions.

EXCEPTIONS

From Vincennes, IN's policy:

"Any exception to this program, including for private projects, must be approved by the Vincennes Board of Works and Public Safety and be documented with supporting data that indicates the basis for the decision. Such documentation shall be publicly available.

Exceptions may be considered for approval when:

1. An affected roadway prohibits, by law, use by specific users (such as state highways) in which case a greater effort shall be made to accommodate those specified user

- elsewhere, including on roadways that cross or otherwise intersect with the affected roadway;
- 2. The costs of providing accommodations are excessively disproportionate to the need or probable use;
- 3. The existing and planned population, employment densities, traffic volumes, or level of transit service around a particular roadway is so low as to demonstrate an absence of current and future need.
- 4. Transit accommodations are not required where there is no existing or planned service:
- 5. Routine maintenance of the transportation network does not change the roadway geometry or operations, such as mowing, sweeping, and spot repair;
- 6. There is a reasonable and equivalent project along the same corridor that is already programmed to provide facilities exempted from the project at hand.

http://www.smartgrowthamerica.org/documents/cs/policy/cs-in-vincennes-ordinance.pdf

5. Network

An ideal Complete Streets policy recognizes the need for a connected, integrated network that provides transportation options to a resident's many potential destinations. Approaching transportation projects as part of the overall network—and not as single segments—is vital for ensuring safe access to destinations. Successful Complete Streets processes recognize that all modes do not receive the same type of accommodation and space on every street, but that everyone can safely and conveniently travel across the network. The Coalition encourages additional discussion of connectivity, including block size and intersection density.

- 5 points: Policy simply acknowledges the importance of a network approach.
- 0 points: Policy does not reference networks or connectivity.

NFTWORK

From Natick, MA's policy:

"The Town of Natick Complete Streets policy will focus on developing a connected, integrated network that serves all road users."

http://www.smartgrowthamerica.org/documents/cs/policy/cs-ma-natick-policy.pdf

6. Jurisdiction

Creating Complete Streets networks is difficult because many different agencies control our streets. They are built and maintained by state, county, and local agencies, and private developers often build new roads. Individual jurisdictions do have an opportunity to influence the actions of others, through funding or development review, and through an effort to work with their partner agencies on Complete Streets. These two types of activities are awarded points independently.

- <u>3 points:</u> A state or Metropolitan Planning Organization's policy clearly notes that projects receiving money passing through the agency are expected to follow a Complete Streets approach. County and municipal policy applies to private development.
- <u>2 points:</u> Policy, at any level, articulates the need to work with others in achieving the Complete Streets vision.
- <u>O points:</u> Policy does not recognize the ways an agency can work with other organizations and developers to achieve Complete Streets.

JURISDICTION

From Omaha, NE's policy:

"The Complete Streets policy will apply to all public and private street design, construction, and retrofit projects managed and implemented by the City of Omaha initiated after the Policy adoption..."

http://www.smartgrowthamerica.org/documents/cs/policy/cs-ne-omaha-resolution.pdf

7. Design

Complete Streets implementation relies on using the best and latest design standards to maximize design flexibility. Design solutions are need to balance modal and user needs. Points are awarded independently for these concepts.

- <u>3 points:</u> Policy clearly names specific recent design guidance or references using the best available.
- <u>O points:</u> Policy does not address design guidance, balancing of user needs, or design flexibility.
- <u>2 additional points available:</u> Policy addresses the need for a balanced or flexible design approach.

DESIGN

From South Bend, IN's policy:

"Sec. 5 Design Standards

(a) The City shall follow accepted or adopted design standards and use the best and latest design standards, policies, principles, and guidelines available. Principles and strategies of good street and bikeway designs offered by the National Association of City Transportation Officials (NACTO) shall be utilized first and foremost in decision making. Guidelines and standards may include, but not be limited to, Federal Highway Administration (FHWA), American Association of State Highway [and Transportation]

Officials (AASHTO), Indiana Department of Transportation (INDOT), the Institute of Transportation Engineers (ITE), the Americans with Disabilities Act (ADA), the Public Right-of-Way Accessibility Guidelines (PROWAG), and the American Society of Landscape Architects (ASLA).

(b) In recognition of various context, public input, and the needs of many users, a flexible, innovative, and balanced approach that follows other appropriate design standards may be considered, provided that a comparable level of safety for all users can be achieved.

 $\underline{\text{http://www.smartgrowthamerica.org/documents/cs/policy/cs-in-south-bend-resolution.pdf}}$

8. Context sensitivity

An effective Complete Streets policy must be sensitive to the surrounding community, its current and planned buildings, as well as its current and expected transportation needs. Given the range of policy types and their varying ability to address this issue, a policy at minimum should mention context sensitivity in making decisions. The Coalition encourages more detailed discussion of adapting roads to fit the character of the surrounding neighborhood and development.

- 5 points: Policy mentions community context as a factor in decision-making.
- 0 points: Policy does not mention context.

CONTEXT SENSITIVITY

From Ashland, MA's policy:

"Complete Streets principles include the development and implementation of projects in a context-sensitive manner in which project implementation is sensitive to the community's physical, economic, and social setting. This context-sensitive approach to process and design includes a range of goals that give significant consideration to stakeholder and community values. It includes goals related to the livability with greater participation of those affected in order to gain project consensus. The overall goal of this approach is to preserve and enhance scenic, aesthetic, historical, and environmental resources while improving or maintaining safety, mobility, and infrastructure conditions."

http://www.smartgrowthamerica.org/documents/cs/policy/cs-ma-ashland-policy.pdf

9. Performance measures

Communities with Complete Streets policies can measure success a number of different ways, from miles of bike lanes to percentage of the sidewalk network completed to the number of people who choose to ride public transportation.

• <u>5 points:</u> Policy includes at least one performance measure. A direction to create measures without naming any is credited in the next element, "Implementation steps."

• <u>0 points:</u> Policy does not include any performance measures.

PERFORMANCE MEASURES

From Reading, PA's policy:

"B. The City shall measure the success of this policy using, but not being limited to, the following performance measures:

- Number of crashes and severity of injuries
- Injuries and fatalities for all modes
- Number of curb ramps
- Number of countdown signals
- Miles of accessible routes
- On-time arrivals for BARTA
- Sidewalk condition ratings
- Travel time in key corridors (point A to point B)
- Emergency vehicle response times
- Number of audible traffic signals
- Number of students who walk or bike to school
- Access to industrial property (trucks)
- Commercial vacancies in downtown improvement district (DID)
- Number of mode users: walk, bike, transit
- Bike route connections to off-road trails (equity across all districts of the City)
- % of city that is within two miles of a 'low stress' bike route
- Number of employees downtown
- Number of bike share users
- Progress towards STAR Community standards: (a) drive alone max 25% and bike/walk min of 5%; (b) 50% of household spending less than 15% of household income on transportation; and (c) bike/pedestrian fatalities – progress toward Vision Zero
- Citizen and business surveys of satisfaction with streets and sidewalks
- Number of bicycle friendly businesses recognized by the League of American Bicyclists
- Number of bike parking spaces The Complete Streets Task Force will present an annual report to the Mayor and City Council showing progress made in implementing this policy.

The annual report on the annual increase or decrease for each performance measure contained in this executive order compared to the previous year(s) shall be posted on-line for each of the above measures."

http://www.smartgrowthamerica.org/documents/cs/policy/cs-pa-reading-order.pdf

10. Implementation steps

A formal commitment to the Complete Streets approach is only the beginning. The Coalition has identified four key steps to take for successful implementation of a policy:

- 1. Restructure or revise related procedures, plans, regulations, and other processes to accommodate all users on every project.
- 2. Develop new design policies and guides or revise existing to reflect the current state of best practices in transportation design. Communities may also elect to adopt national or state-level recognized design guidance.
- 3. Offer workshops and other training opportunities to transportation staff, community leaders, and the general public so that everyone understands the importance of the Complete Streets vision.
- 4. Develop and institute better ways to measure performance and collect data on how well the streets are serving all users.

Assigning oversight of implementation or requiring progress reports is a critical accountability measure, ensuring the policy becomes practice. Policies can also influence the funding prioritization system to award those projects improving the multimodal network. Points for either type of activity are awarded independently.

- <u>3 points:</u> Policy specifies the need to take action on at least two of the four steps identified above.
- 1 point: Policy includes at least one of the above four implementation steps.
- <u>O points:</u> Policy does not include any implementation or accountability measures.
- <u>1 additional point available:</u> Policy identifies a specific person or advisory board to oversee and help drive implementation, or establishes a reporting requirement.
- 1 additional point available: Policy changes the way transportation projects are prioritized.

IMPLEMENTATION STEPS

From Weymouth, MA's policy:

"Implementation of the Complete Streets Policy will be carried out cooperatively among all departments in the Town of Weymouth with multi-jurisdictional cooperation, and to the greatest extent possible, among private developers and state, regional and federal agencies. The Department of Planning and Community Development will serve as the technical review agency for all Complete Streets projects. The Department of Planning and Community Development will forward the project documentation and plans to all applicable Town departments for comment during the review process. Ultimately, the project will require a vote by the appropriate governing body.

The Town shall make the Complete Streets practices a routine part of everyday operations, shall approach every transportation project and program as an opportunity to improve streets and the transportation network for all users, and shall work in coordination with other departments, agencies and jurisdictions.

The Town will review and revise or develop proposed revisions to all appropriate planning

documents, zoning codes, subdivision regulations, laws, procedures, rules, regulations, guidelines and programs to integrate the Complete Streets principles in all street projects, as feasible.

The Town will maintain a comprehensive priority list of transportation improvement projects including problem intersections and roadways.

The Town will maintain a comprehensive inventory of pedestrian and bicycle infrastructure and will prioritize projects to eliminate gaps in the sidewalk and bikeway network. The Town will coordinate with MassDOT to confirm the accuracy of a baseline pedestrian and bicycle accommodations inventory in order to prioritize projects.

The Town will re-evaluate Capital Improvement Projects prioritization to encourage implementation of Complete Streets principles.

The Town will incorporate Complete Streets principles into the Town of Weymouth's Master Plan as well as other plans.

The Town will train pertinent Town staff on the content of Complete Streets principles and best practices for implementing this policy.

The Town will utilize inter-department coordination to promote the most responsible and efficient use of resources for activities within the public way.

The Town will seek out appropriate sources of funding and grants for implementation of Complete Streets policies."

http://www.smartgrowthamerica.org/documents/cs/policy/cs-ma-weymouth-policy.pdf

Additional elements

While Complete Streets policies are based on the principle of connecting people and place in transportation projects, many communities add language regarding environmental best practices or directives relating to placemaking. While the Coalition does not score these additional elements, we encourage agencies to consider cross-referencing related initiatives.

ADDITIONAL ELEMENTS

From Reading, PA's policy:

"Section 6: Additional elements

A. Green Streets: In addition to providing safe and accessible streets in the City of Reading, care shall be given to incorporate best management practices for addressing storm water runoff. Wherever possible, innovative and educational storm water infrastructure shall be integrated into the construction/reconstruction or retrofit of a street.

B. Attention to Aesthetic: Complete Streets are beautiful, interesting and comfortable places

for people. The design of cities begins with the design of streets, as community places where people want to be. As part of Reading's public realm, streets shall be held to a higher standard for urban design at a human scale. Multi-modal accommodations and all City projects in the right-of-way shall be approached as opportunities to enhance the aesthetic qualities of Reading and its public realm through the thoughtful creation of place. Wherever feasible, streetscapes shall protect and include street trees and native plants, and incorporate landscape architecture, public art, pedestrian amenities and wayfinding signage, sidewalk cafes and street-facing retail, and/or other elements that enhance the attractiveness of Reading and foster healthy economic development."

http://www.smartgrowthamerica.org/documents/cs/policy/cs-pa-reading-order.pdf

Weighting the policy elements

The authors of this report evaluated policies based on the ten elements as described above. For a summary of the scoring system, see Table A1 on page 21.

Awarding each element a total of 5 points establishes benchmarks in each category without drawing unnecessary comparisons between elements. However, the Coalition believes that some elements of a policy are more important to establish than others. To reflect this, the tool uses a weighting system.

The chosen weights were established through a collaborative process. An initial draft compiled evidence from research, case studies conducted for the American Planning Association report, *Complete Streets: Best Policy and Implementation Practices*²³, experience in policy development, and work with communities across the country. The Coalition's Steering Committee and attendees of the Coalition's 2011 Strategy Meeting reviewed this draft and provided comments. Staff incorporated these comments and finally simplified the weights so that they would a) add to a total possible score of 100, and b) would not require complex mathematical tricks or rounding. Changes to this weighting are possible in the future, based on continued research into how policy language correlates to implementation.

The identified weight for each element is multiplied by points awarded, then divided by 5 (the highest possible number of points). For example, a policy that addresses bicycling, walking, and public transportation for people of all ages and abilities receives a total of 3 points. Those points are multiplied by 20, the weighting assigned to that policy element, and divided by 5, the highest possible number of points. For this policy element, the policy receives a score of 12 out of a possible 20.

When the scores for every element are summed, the policy will have a score between 0 and 100, with a higher number indicating it is closer to ideal.

20

Additional point for directing changes to project selection criteria	1

A note on plans and design guidance

The Coalition recognizes that there are inherent differences among policy types. What can be accomplished through a legislative act is different than what might be included in a comprehensive plan, for example. This report's authors acknowledge that some elements of an ideal policy are unlikely to appear in some policy types and encourage comparison within a policy type, rather than across all types. For this reason, policies are grouped by policy type in Appendix B.

While the Coalition recognizes and counts Complete Streets policies included in community transportation master plans, comprehensive plans, general plans, and design guidance, these policies are not subjected to the numerical analysis used in this document. The scoring tool does not work as well for comprehensive plans, where a finer analysis is needed to accurately determine strength and reach of the Complete Streets element within the overall framework of a large and complex plan. The tool is also inappropriate for design standards and guidance. Though some design manuals have a more extensive discussion of policy, their place within the transportation process makes the inclusion of some elements of an ideal Complete Streets policy inappropriate. Design guidance is rarely the first Complete Streets policy adopted in a community; it is more often the realization of some earlier policy effort and part of the overall implementation process.
