Subject: 56 Unit Rental Housing Project Proposal – High Street, Norwell

Dear Mr. McInnis:

We have lived on High Street for 44 years. For as long as we can remember we have always had low water pressure. However, we are now very concerned about what effect the 56 unit, 90 bedroom housing project proposal will have on the already existing low water pressure on High Street. The PSI has always been low even at off peak hours. We have great concerns about a project of this size and how it will affect the water pressure and volume as well as the impact it will have on High Street residents.

Please advise us if the Water Department has taken this into consideration when considering this massive, oversized project.

Thank you for your attention to this matter.

Bonnie and Randy Holmes
121 High Street
