The Black Pond Bog is a significant feature. The Natural Heritage Working Group has identified this area as an Important Natural Area (INA) for its unique habitat and biodiversity. The property includes a forested area, wetlands, and a small pond. The bog is located near the center of town and is accessible to the public. The property is threatened by development, and efforts are underway to protect it.

The Cuffee Hill Conservation Area is part of a unique sensitive area that encircles Black Pond. The area includes a small pond, wetlands, and forested areas. The conservation area is threatened by development, and efforts are underway to protect it. The area is a significant feature for the biodiversity and ecological integrity of the town.

The Donovan Farm Fields are part of a large land grant in colonial days. The land was purchased by a group of freed slaves. The farm fields are currently used for agricultural purposes. The property includes a small pond, wetlands, and forested areas. The property is threatened by development, and efforts are underway to protect it.

The Miller Woods is a significant feature. The natural heritage working group has identified this area as an important natural area (INA) for its unique habitat and biodiversity. The property includes a forested area, wetlands, and a small pond. The property is threatened by development, and efforts are underway to protect it.

The Fogg Forest & Miller Woods is a significant feature. The natural heritage working group has identified this area as an important natural area (INA) for its unique habitat and biodiversity. The property includes a forested area, wetlands, and a small pond. The property is threatened by development, and efforts are underway to protect it.

The Stetson Meadows is a significant feature. The natural heritage working group has identified this area as an important natural area (INA) for its unique habitat and biodiversity. The property includes a forested area, wetlands, and a small pond. The property is threatened by development, and efforts are underway to protect it.

Welcome to the Towns of Norwell Conservation Areas! The Norwell Conservation Area is located on a 100-year-old property that was once part of the North River. The conservation area is located on a former coal mine and is intertwined with the history of the town. The conservation area is open to the public on a first-come, first-serve basis. Benches are located along the trail, and a small picnic area is located just off the parking area. Many of the trail sections are accessible and open to the public on a first-come, first-serve basis. The trail is somewhat rugged and difficult. Stone walls border and intersect the hardwood forest interspersed with fields. The trail is located in a drumlin and moraine landscape with many low wetlands and woody swamps as a result of glacial deposition. The history of the 100-year tie to the North River is intertwined with the history of Norwell. The conservation area is located on a former coal mine and is intertwined with the history of the town.
